

Hurricane Insurance that Makes Sense

HURRICANE PM®

Hurricane PM® covers seawalls, docks, landscaping, outdoor art, and beach erosion, among many others.

Hurricane PM® is first-dollar parametric hurricane insurance for items either not covered by, or below traditional insurance deductibles for commercial and residential clients.

With Hurricane PM® policies, there are no deductibles and almost any economic loss qualifies for a claim. Claims are typically paid within a short window of a covered loss payment event.

Key Benefits

No Deductible and Limited Exclusions:

Unlike traditional insurance, there's no deductible, and exclusions are minimal.

Speed of Payment:

Quick payouts help mitigate economic losses immediately after a hurricane.

Customizable Coverage:

Tailored solutions to address specific needs, including property damage, business interruption, supply chain issues, lost revenue and/or economic losses.

Complement to Existing Policies:

Can fill gaps in traditional policies, such as Builder's Risk or property insurance.

Highlights

Eligible Risk:

Any industry besides cannabis, ammunition, manufacturing, bituminous coal mining, underground, support activities for coal mining and surface coal mining.

Limit:

Minimum \$10,000 and up to \$10 million per policy.

Coverage:

Deductibles for traditionally insured exposures, loss of revenues, profits, and/or tax base (public entity) with or without property damage, extra and extraordinary expenses and loss of value or market value.

Available Trigger Options:

Triggers start at windspeeds of 74 mph
- Proxy 60-second sustained wind speed
- Anemometer 60-second sustained wind speed
- Hurricane Cat-In-A-Circle

Policy Periods:

Standard 12 months.

Hurricane PM® covers exposures that typically are not insured or that are hard to insure such as:

- Business Interruption (BI) / Contingent BI / Supply Chain Interruption even without property damage
- Property damage
- Deductibles for traditionally insured exposures
- Loss of revenues, profits, and/or tax base (public entity) with or without property damage
- Extra and extraordinary expenses
- Loss of value or market
- Storm and tidal surge
- Water damage
- Seawalls and beach refurbishment
- Engineering and safety certification costs
- Equity protection
- Annual aggregate limit

Who can benefit from Hurricane PM® Insurance?

Hurricane PM® Insurance is ideal for:

- Commercial property owners
- Businesses with significant hurricane exposure
- Developers and contractors
- Municipalities and utility providers
- Insurance carriers seeking embedded solutions

Hurricane PM® vs. Traditional insurance:

Features	Hurricane PM®	Traditional Insurance
Trigger for Payout	Parametric (data-driven triggers)	Proof of physical damage required
Claims Process	Fast and straightforward	Lengthy and documentation-heavy
Exclusions/Deductibles	Minimal or none	Often substantial
Purpose	Addresses immediate financial relief	Covers physical damage

FAQ's

What is Hurricane PM®?

Hurricane PM® is a parametric (re)insurance product designed to provide swift financial relief following a hurricane. It uses a pre-defined triggers, such as sustained wind speed or location-specific impact data, to determine payouts, bypassing traditional claims processes.

How does Hurricane PM® work?

- 1. Trigger:** The policy is activated based on objective data, such as 60-second sustained wind speeds exceeding a certain threshold within a defined radius of the insured location.
- 2. Payout:** Once the trigger is met, a payout is made directly, with no need for proof of physical damage.
- 3. Speed:** Claims are processed quickly—funds are often available within days of the triggering event.

What are the triggers used in Hurricane PM®?

The product uses dual or triple triggers, which may include:

- **Moody's RMS H-Wind:** A 60-second modeled sustained wind speed reading from reliable third-party data sources.
- **Hurricane Cat-in-a-Circle:** A trigger based on the proximity of the storm to predefined geographic coordinates and storm track.
- **Hurricane-Hardened Proprietary Anemometer Network:** Where available, proprietary anemometers provide on-the-ground wind speed measurements, further refining accuracy.

What's the difference between single trigger and multi-trigger policies?

It depends which trigger activates the insurance payout:

- **Single Trigger:** Pays out a predetermined amount when the hurricane wind speed is met or exceeded.
- **Multi-Trigger:** Pays out based on the highest 60-second sustained wind speed reading from any trigger (Dual Trigger: Proxy or Anemometer; Triple Trigger: Proxy, Anemometer, or Hurricane Cat-In-A-Circle).

What is the Proprietary Anemometer Network?

NormanMax owns the Hurricane PM® platform, which utilizes proprietary data from a network of over 100 hurricane-hardened anemometer stations situated near coastal urban concentrations in the U.S. and the Americas.

These are specifically designed to withstand the conditions associated with a landfalling hurricane. The anemometer technology provides policyholders with real-time updates about wind conditions in their areas via the website and mobile app, offering transparency and peace of mind throughout the claims process.

Can Hurricane PM® be embedded in other policies?

Yes, Hurricane PM® can be embedded into existing insurance policies, such as Boiler & Machinery or first-party property insurance, providing additional protection against hurricane-related risks.

How much coverage is available, and what is the typical premium?

Coverage amounts are flexible and depend on the policyholder's specific needs. Premiums are competitively priced, with typical costs starting around \$1,000 per \$100,000 of coverage.
